Information Age

1. As a student, do you consider social media as a valid source of data for your school work? Why or why not?

   - No, social networking isn't really helpful for academic work. A lot of the random content that people submit is untrue. Getting the wrong information is easy. It might give you some ideas, but for accurate answers, it's better to consult books or academic sources. Social media is simply too disorganized for important business.

2. One of the prevailing problems affecting students today regarding the use of social media is cyberbullying. What measures should school officials and parents establish to address this problem?

   - Parents and teachers must work together. Schools must establish guidelines for online behavior and support children who are being bullied. Parents should monitor their children's internet behavior and have a conversation with them about not being cruel. Anyone who bullies others need to face consequences. Adults should intervene quickly if someone is being bullied.

3. What can you suggest to further improve the use of social media in education? Social media can be used by teachers for group chats and uploading assignments. However, schools must also teach children how to utilize it properly, such as how to spot phony goods. When used wisely, it aids in learning. Otherwise, it only exacerbates the situation.

4. What are the positive and negative impacts of social media in education?
    - The positive is that pupils communicate easily, share school materials, and pick up enjoyable skills. The negative aspects include time wastage, exposure to false information, and bullying. Too much scrolling causes some people to lose attention. Social media can be beneficial, but only if users utilize it properly.y.
